

EUROPEAN RESEARCH ICEBREAKER

WP5: Developing organisational and governance frameworks for management of a dedicated multinational Polar research facility

This work package enables the consortium to reach agreement on the future operation of the management agency of the facility. This encompasses preparatory actions on elaborating decision making across the whole set of functions (scientific, logistical support, etc.), leading to a consensus on adopting the best model at the European scale.

This work package works closely with the legal and financial frameworks to ensure effective implementation and the generation of a appropriate governance structure for the ship for ensuring agreement and a final decision on construction.
